Why Use Zero Trust Scanner?

Effortless security monitoring with **real-time** insights helps you stay ahead with automated vulnerability detection.

[Learn More >](#)

100% open source with complete **transparency** transparency and **community-driven innovation**

Comprehensive **vulnerability insights** to detect and analyze security risks effortlessly

Real-time alerts sent via **Slack** to keep you ahead of threats.

First Step with Zero Trust Scanner

Installing ZeroTrustScan

ZeroTrustScan seamlessly connects with a variety of widely used platforms and tools. You can explore the full range of supported integrations on the Ecosystem page. Here are some of the most commonly used options:

[Kubernetes operator](#)

[GitHub Actions](#)

[VS Code plugin](#)

See [Ecosystem](#) for more

Get Started

Examples

1. Scan a container image from registry,

```
zts docker:redis:alpine
```

2. Explicitly use the Podman daemon

```
zts podman: mariadb:10.1
```

3. Read Syft JSON from path on disk

```
zts sbom:path/to/syft.json
```

Expand your Knowledge

Now that you're set up, here are some valuable resources to help you dive deeper:

Comprehensive Documentation: Discover all the [features](#) and capabilities of ZeroTrustScan.

Community Forum: Join discussions, ask questions, and share [insights on GitHub](#).

Latest Updates: Stay informed about [new releases and feature announcements](#).

Follow Us on Social Media: Get security [tips and updates on linkedin\(@ZeroTrustSec\)](#).
